

# INDIVIDUALISATIONS –

## FROM SMALL ADJUSTMENTS IN DESIGN AND MECHANICS TO NEW DEVELOPMENT

Individualisation can often achieve great effects with little effort.

An "off-the-shelf" product becomes your customised product. Depending on the effort involved, this can be worthwhile even for the smallest quantities.

Contact us and let us advise you!

## INDIVIDUALISATIONS

Order Description	Individualisation Design Casing colour	Individualisation Design Customer Logo	Individualisation Mechanics Casing modification	Individualisation Mechanics Additional parts	Individualisation New development System
Order Number	R10267	R10268	R10269	R10270	R10247
Individual colouring if the casing. Coordination of the colour tone with the customer	✓				
Application or printing of a customer logo. Providing of the logo or sticker, administration and mounting		✓			
Mechanical adjustments, sheet metal work on the casing such as additional casing openings			✓		
Planning and production of additional sheet metal parts, e.g. brackets, mounting brackets or PC I/O shields				✓	
Complete customized new development, creation of a product concept on the basis of a specification sheet, development, realisation, prototypes, series production					✓

- > Fast realisation

### INDIVIDUALISATION-DESIGN

There are many ways to customise products. They can range from the individual colouring of the casing or front panel to the printing or sticking on of a customer logo. Through our local partners, we can realise requirements of this kind quickly and easily, even for smaller quantities.

### INDIVIDUALISATION-MECHANICS

Sometimes simple mechanical work on the casing, such as moving an interface, is enough to turn a standard PC into your ideal PC. These simple mechanical adjustments are carried out in our in-house workshop.

With additional mechanical parts, which we design for you and partly have produced by partners, a great benefit can be achieved with little effort. For example, mounting costs can be considerably reduced by attaching an inexpensive mounting plate or the industrial PC can be brought into a thermally more favourable mounting position. Or a scanner can be given a secure place on the industrial PC by means of a bracket.

## INDIVIDUALISATIONS

### INDIVIDUALISATION-NEW DEVELOPMENT

Our development team is specialised in implementing customer requirements in individual special solutions. For this purpose, we define the specifications together with you and involve you throughout the entire development process:

#### ADVICE

In the first step, we listen to you carefully to understand what you have in mind. Then we present you with a concept, which we refine together with you so that our developers know what they need to implement.

#### DEVELOPMENT

During the development process, we always keep you up to date, i.e. you are always informed about the current status. At the end you will receive e.g. a prototype or a functional sample.

#### REALISATION

Once the prototype has been approved by you, we move on to the realisation. We take care of procurement, logistics, manufacturing, etc.

Examples of new developments:
