Product Overview

Powered by the latest generation of Intel® Celeron® processor J3455 (formerly codenamed "Apollo Lake"), NISE 52 is fanless PC designed for industrial applications which demand low power consumption and abundant I/O interfaces but with limited installation space.

NISE 52 supports a wide range of operating temperature from -5~55 Celsius degree and wide range DC power input from 9V to 30V. NISE 52 is also the first system in the slim NISE 50 series to support 3 independent displays. The NISE 52 have strong connectivity - Ethernet-based LAN port and traditional serial port, mainly for Modbus TCP or Modbus RTU communication. For wireless connectivity, there are 2 x mini PCIe socket which can support optional wireless modules for IoT applications, for example, Wi-Fi, Bluetooth, 4G LTE modules as well as storage module. NISE 52 is definitely the best choice for M2M intelligent system as an intelligent IoT gateway.
